## ODORLESS ACRYLIC SYSTEM

### Monomer

- **UV STABILIZERS-** Provide a non yellowing, color stable finish
- **CROSS LINKERS-** Cross linking technology that ensures strength and flexibility, giving you the ability to create strong flexible nails
- **PLASTICIZERS-** Plasticizers act as “shock absorbers” which make the nails more resilient and flexible

**THIS PRODUCT:** This odor free technologically advanced formulation will “clear the air”, inspiring client compliments, and appreciation.

**HOW TO USE:** Apply this product using one part liquid and two parts powder. This system does not require a primer application. When the enhancement has cured, you will have a tacky layer. With the proper ratio it should be minimal. This layer is very easily filed off, using the file in one direction. Once you have removed the tacky layer, you simply file as you would a traditional acrylic enhancement. As an alternative to filing off the tacky layer we have created a sealant that is applied over the dried nail. After the application of the sealant you simply file as you would a traditional acrylic enhancement.

### THE BENEFITS ARE:

- **Minimal air born filing dust**
- **Odor free**
- **No primer required**
- **Strength with flexibility**

**N.O.P LIQUID MONOMER** is available in 5 convenient sizes: 2, 4, 6, 8, 16, and 32oz bottles

## ODORLESS ACRYLIC SYSTEM

### POWDERS

**THIS PRODUCT:** N.O.P. powders are a co-polymer blend, which makes them a slower setting powder. This will give you more time to sculpt the perfect smile line. Developed with state of the art polymer chemistry, NOP prevents center pocket lifting by shrinking less.

**HOW TO USE:** To apply use with N.O.P monomer. Use a ratio of one part liquid and two parts powder. If you use this product too wet the product will get sticky, if this happens you should wipe your brush on the towel and pat it back into the powder ( not the liquid) then back onto the nail and finish sculpting the nail.

**N.O.P POWDERS,** These high- performance powders come in four superb colors that result in dependable colors.

- White
- Pink
- Natural
- Clear

**Available sizes:** 1.5, 4, 7, 12oz jars

## N.O.P Sealant

**This Product:** N.O.P. Sealant is resin based. It is designed for technicians that would rather not have to file off the tacky layer left behind by odorless products.

**How To Use:** After the acrylic has dried, brush over the entire nail with N.O.P Sealant.
